Detailed Action

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-129 and 144-189, are drawn to a method of data encryption / decryption using multiple key management, distribution and generation methods, classified in class 380, subclass 277.
 - II. Claims 130-143, are drawn to an interface and a processor for transferring and receiving electronic book, classified in class 345, subclass 748.
2. The invention are distinct, each from the other because of the following reasons:

The inventions in Group I and II are related as subcombinations disclosed as usable together in a single combination. In the instant case, Group I invention has separate utility, such as a method of data encryption / decryption using multiple key management, distribution and generation methods. Group II invention has separate utility such as an interface and a processor for transferring and receiving electronic book. See MPEP § 806.05(d).
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
